

COLOUR. CREATIVITY. MONTACOLOR®.

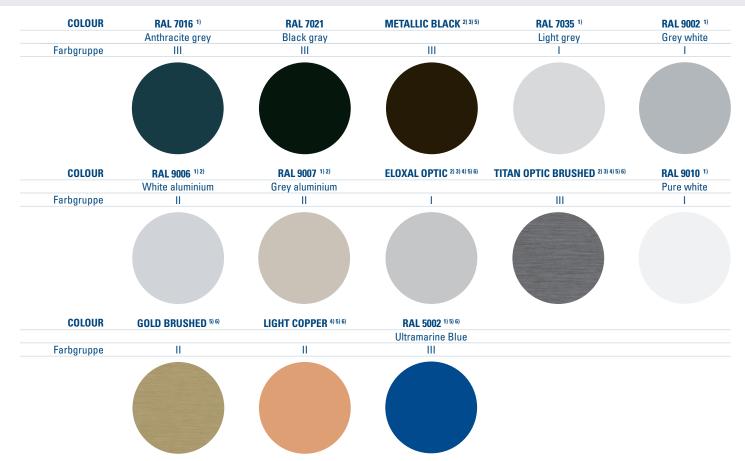

COLOUR CHART FOR ALUMINIUM, STEEL AND SANDWICH PROFILES

COLOUR COLLECTION

STEEL

ALUMINUM

- 1) Colour shade only similar to RAL; matching of colour not guaranteed within a delivery, either.
- 2) Rear protective lacquer provided with arrow marking! Colour differences can occur with the use of metallic paints due to the metal pigments.
- 3) Matching of colours not guaranteed within a delivery, either!
- 4) Clear lacquer
- 5) Limited storage, longer delivery times
- 6) Additional charge

COATING TYPES

HOW TO CHOOSE THE RIGHT COATING

Choosing the right coating for a façade profile is an important part of good building.

Depending on where the building is constructed, different demands are made on the outer shell. The most important component is deemed to be the composition of the ambient air.

Surrounding commercial and industrial operations with emissions can require a corresponding coating, for example, but proximity to the coast or foreseeable mechanical loads also have an influence on the choice of this. Ask the Montana Building Systems specialist. He will help you.

BASIC MATERIALS Steel

S320GD zinc coating both sides Z275 or ZA255 according to DIN EN 10346 or Magnesium-Zinc according to the permission.

On demand with additional coating available to increase the corrosion protection class

Aluminium

EN AW-3004 [AIMn1Mg1] or EN AW-3005 [AIMn1Mg0.5] or EN AW-3105 [AIMn0.5Mg0.5] according to DIN EN 485-2 On demand with additional coating available

Stainless steel

Corrosion-resistant stainless steel 1.4526 to EN 10088-2 High gloss surface Tolerances to EN ISO 9445 Yield strength approx. 300 MPa

GLOSS ACCORDING TO

GARDNER (60°) Prepainted steel Polyester 30–60 % PVDF 25–40 % Colorcoat Prisma® 30–40 % Prepainted aluminium Polyester 35 %, PVDF 30 %

HEAT RESISTANCE

Polyester up to 80° C, PVDF up to 110° C (values by experience for inconstant temperatures)

CORROSION PROTECTION CLASS

Steel prepainted, according to DIN 55634

Polyester 25 µm until C4-L possible PVDF 25 µm until C5-L possible Prisma 50 µm to C5-M possible (RC5 corrosion-resistance category)

THIN COATING (DU)

Thin coating is polyester-based and applied with a thickness of approx. 15 µm.

The colour is similar to RAL 9002 or RAL 9010. The rear is provided with light-coloured lacquer. In view of the low layer thickness, we cannot guarantee evenness of colour under the coils.

The thin coating is mainly used on the inside of buildings as the inner skin of sandwich elements, coffers or bearing profiles.

Thin coating is not suitable for outside use by virtue of weathering and corrosion signs occurring within a short period of time.

POLYESTER

Polyester coating is a smooth layer based on polyester resins and can only be used in a non-aggressive environment. We supply this coating with a layer thickness of approx. 25 μ m as standard, with the rear always provided with a light-coloured lacquer.

A special type with a layer thickness of 25 μ m on both the front and rear is also possible on request.

COATING TYPES (CONTINUATION)

PVDF

PVDF is a coating based on polyvinyl difluorides and other bonding agents. The properties of this coating are determined mainly by the number of polyvinyl difluorides. Our PVDF coating contains at least 70-80% polyvinyl difluorides.

The PVDF coatings supplied by Montana Building Systems Ltd. are elastic and (mechanically) hardwearing.

They are equally durable and resistant to solvents, chemicals and UV radiation.

The PVDF coatings are supplied with a layer thickness of approx. 25 µm as standard, with the rear always provided with a light-coloured lacquer.

COLORCOAT PRISMA®

Colorcoat Prisma® 50 µm is designed around a thick-film coating formulation, providing a higher UV and corrosion resistance than PVDF. A high-performance primer provides excellent corrosion resistance, complemented by a robust top-coat with good scratch and abrasion resistance for easier handling and processing. Colorcoat Prisma® is a technically and aesthetically advanced product, allowing flexible colour choice with outstanding colour and gloss retention.

CORROSION GUARANTEE COLORCOAT PRISMA®

Wall and roof components up to 30 years. The guarantee depends on the local situation and requires analysis beforehand.

AVOIDING COLOUR DIFFERENCES

The so-called metallic finishes (such as RAL 9006 and RAL 9007) require special attention, with aluminium particles providing for a special gloss and colour effect which differs according to the material batch. When using this coating, Montana **Building Systems Ltd. recommends** that the façade areas be taken into account in the order specifications so that these can be produced from a single batch of material.

The metallics have arrow marking on the B side or on the protective foil so as to clearly indicate the texture direction for perfect fitting.

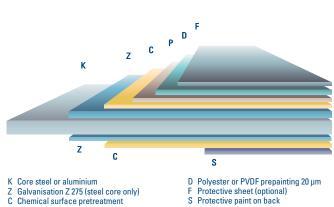

Please note that all colours may be subject to deviations due to different material batches within defined tolerances; these must be accepted. To avoid this, please have the order manufactured from a single batch.

DELIVERY OPPORTUNITIES

You could check the standard colours, material thicknesses, developments and profiles in our colour chart MONTACOLOR®!

MINIMUM QUANTITIES FOR SPECIAL PURCHASES

1250 mm: Steel 7 t / Aluminium 2 t 1500 mm: Steel 15 t / Aluminium 7 t

P Primer 5 um

MONTACOLOR® for a more colourful world

Although colours have been included in interior workplace design for a long time now, the conscious use of them as design elements on external facades has only become established over the past 20 years. Colours are a suitable and economical means of creating emphases and establishing identities.

Baer Aushub & Transporte, Mettmenstetten (CH)

Gebinde Logistik Center AG, Villmergen (CH)

Kraftreaktor Klettereldorado, Lenzburg (CH)

Zuckerfabrik Frauenfeld (CH)

MTG Sportinsel, Wangen im Allgäu (DE)

Autobahnraststätte Quinto (CH)

The colour samples are printouts of the original colours, they represent the colour only similar.

Our products may be subject to changes due to technical developments. Therefore the information in our leaflets is provided for information purposes only and may be subject to change. The constructions, details and flashings shown are shown merely for illustration purposes and do not imply any commitment. They must be checked for fitness for the actual project and requirements. Technical details will become part of a contract only by mutual agreement and with our written confirmation. All orders are subject to our general terms of sale and delivery. The latest version of our leaflets and documents can be downloaded from our homepage. Reproduction and reprinting prohibited.
